

Patent and Scientific literature analysis, IP trends analysis (year-wise, assignee-wise etc.), Clinical trials, Regulatory filings, Pre medical approvals (PMA), Market research, 10k filings, Technology trends, White space analysis, Lawsuit trends, Products, SWOT etc.

Brief Overview

Patent landscape report is a comprehensive analysis of patents, scientific literature and market research. Report is focused on the research area given by the client. A Patent landscape study tells the white space in the research area so that company can plan their entry in the field. Report also tells IP trends to figure out density of activity in the area. Technology decay and rise can also be predicted through trends analysis and current activities in the area. Market research is also done to complete the report with key current and future products.

A landscape report can also include clinical trials, regulatory filings, pre medical approvals, 9k and 10k filings, annual reports etc. according to client's requirement.

A landscape report can make your research strategies better by telling you about past, present and future trends in technology and research. This kind of report is needed when a company has to venture into some market or has to know about the happenings in the market or to reinforce existing markets.

Benefits you would derive

- Better strategy planning for future and current research.
- Competitor tracking for particular technology area.
- Finding opportunities for in-licensing.
- Technology tracking.
- Market growth and potential.
- Clinical trials advancements.

Methodology for Search/Analysis

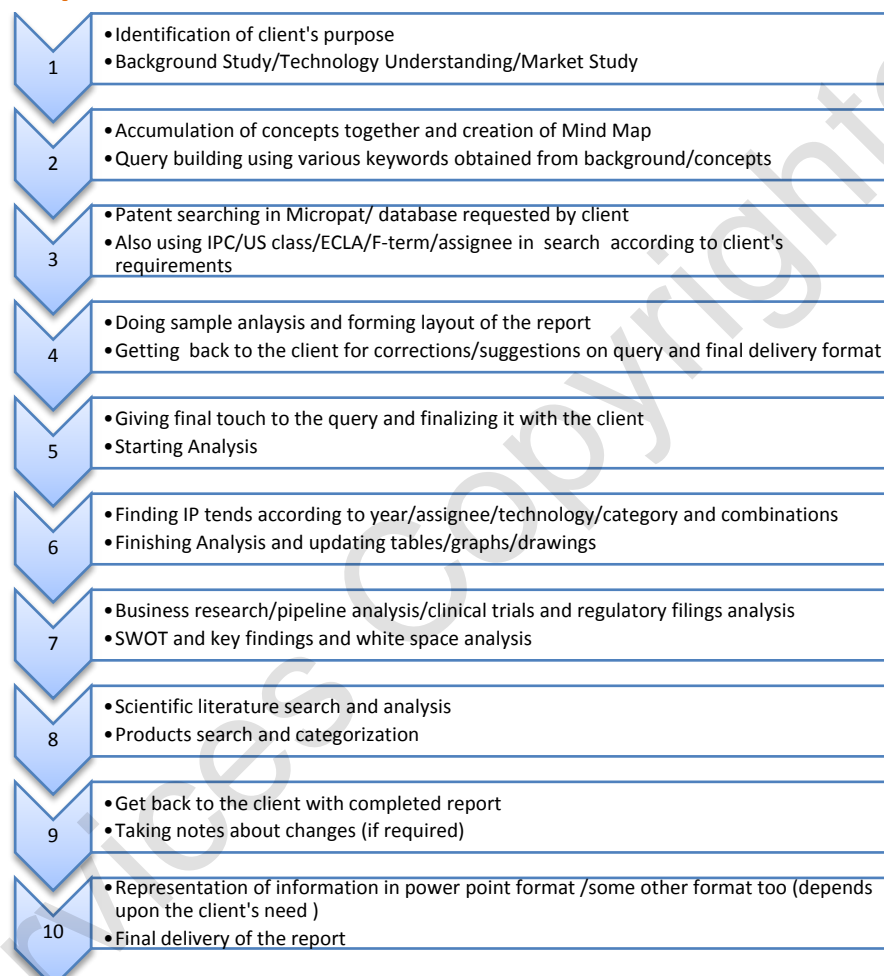

Our team consist of patent analysts, scientists, doctors and PhDs from IITs and IISc to carry out best patent technology search. Our team do background study from Internet, research papers and books. Based on the background search we prepare a mind-map of concepts and search strategy. We also do analysis of some patents and get client's feedback of our strategy and final layout of the report.

Next step, we then move ahead to perform analysis and categorization of patents into technology buckets.
